1	System Overview	1

CHAPTER 1

Scope

This document provides the System Development Plan (SDP) for the The Balance System. The system will be referred to as the The Balance System.

1.1 Identification

The The Balance System described in this document shall be known as The Balance System version 1.

1.2 System Overview

The The Balance System is a game that users an play a game.

Figure 1 shows the high-level architecture for the The Balance System system. This

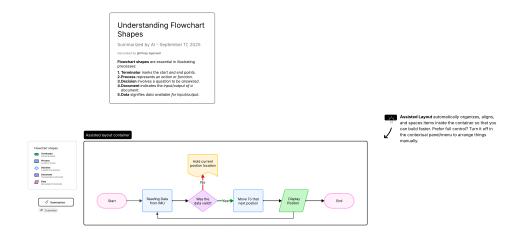

Figure 1: System Overview

diagram shows the major external interfaces that provide the capabilities of The Balance System. As are shown, the The Balance System can provide ...TBD....

This system would be a game where the user would have to balance a ball on a LCD screen that is builtin on the STM32 board. We shall read data from an MEM every single frame. The Balance System would keep track of the current position of the ball and where

System Development Plan

the next updated move is. This helps keep track of the system of where the ball is until a movment occure. The Balance System shall process at a maximum 180 Hz. This would give the user enough time to process the current angle of the ball and be able to present on the LCD-TFT screen.

Document Overview

This section provides information about this document's security/privacy considerations, contents, structure, and version information.

UNCLASSIFIED

CHAPTER 2

References

This section provides a list of referenced items for this document.

2.1 Acronyms and Abbreviations

This section defines acronyms and abbreviations used in this and related documents.

Table 1: Acronym Definitions

Acronym	Definition	
ATV	Analog Television	
AV	Audio / Visual	
End of acronym definition table		

2.2 Glossary and Definitions

This section defines glossary terms used in this and related documents.

Table 2: Glossary Terms and Definitions

Glossary Term	lossary Term Definition	
Communications Communication is information transfer, among users or according to agreed conventions.		
Customer	The local government project lead who is acting as a general manager for the sponsor to ensure that the contractor team executes the project according to stakeholder goals.	
End of glossary terms table		

2.3 Referenced Documents

This section lists the referenced documents for this document. The references are categorized into two categories:

External Documents not directly associated with this project.

Project Documents that are directly associated with this project.

SDP20231224-P1:126

System Development Plan

- 2.3.1 External Documents
- 2.3.2 Project Specific Documents

System Development Plan

CHAPTER 3

Required Work Overview

The scope of the work is to write software to an STM32F429I-Disc. The application would be a full stack development. This system shall require user input and display report.

3.1 Program Status

The project started because of the board the was purchased for another class. That class ask to create a system that requires input and outputs between an MCU. It is easier to just use that project as a guideline to project plan for this class.

3.2 SDLC Situation

This section is ...TBD....

3.3 Requirement Plans

The current plan is to write requirement once the deployment system is solidify. The requirements will be written in a different in file. This file will be a csv that organizes what need to be done for the system.

3.4 Documentation Plans

This section is ...TBD....

The following documents are listed here just to test reference generation. A "real" **SDP** would reference these as applicable for the project.

- ref 'KNEAD'OCD'ExProj, ref 'KNEAD'OCD'ExProj [ref 'KNEAD'OCD'ExProj] is the OCD, which outlines the project overall so, generally, it is created first.
- ref'KNEAD'SDP'ExProj, ref'KNEAD'SDP'ExProj [ref'KNEAD'SDP'ExProj] is this document.
- ref'KNEAD'SPS'ExProj, ref'KNEAD'SPS'ExProj [ref'KNEAD'SPS'ExProj] is the SPS, which should come from the customer or end user, but often is generated by the developer with customer approval.
- ref 'KNEAD'SSS'ExProj, ref 'KNEAD'SSS'ExProj [ref 'KNEAD'SSS'ExProj] is the SSS that is the developer's design specification to meet the SPS requirements.

System Development Plan

- ref'KNEAD'SUM'ExProj, ref'KNEAD'SUM'ExProj [ref'KNEAD'SUM'ExProj] is the SUM that acts somewhat like part of the SSS since it illustrates the UI design part of the SSS, but in a separate artifact that also can be used as a standalone users' manual.
- ref 'KNEAD'HRS'ExProj, ref 'KNEAD'HRS'ExProj [ref 'KNEAD'HRS'ExProj] is a HRS, which often is not used for smaller projects but can have multiple instances for large projects to more fully detail hardware design.
- ref 'KNEAD'SRS'ExProj, ref 'KNEAD'SRS'ExProj [ref 'KNEAD'SRS'ExProj] is a SRS, which often is not used for smaller projects but can have multiple instances for large projects to more fully detail software or firmware design.
- ref 'KNEAD'IRS'ExProj, ref 'KNEAD'IRS'ExProj [ref 'KNEAD'IRS'ExProj] is the IRS, which often is not use but may be needed, even if HRS or SRS artifacts are not, to fully document detailed interfaces such as Application Programming Interfaces (APIs) or other detailed mechanical or electrical interfaces.
- ref 'KNEAD'SSDD'ExProj, ref 'KNEAD'SSDD'ExProj [ref 'KNEAD'SSDD'ExProj] is the SSDD that provides a road map to the design and other design details needed to understand the hardware and software design.
- ref"KNEAD'STP'ExProj, ref"KNEAD'STP'ExProj [ref"KNEAD'STP'ExProj] is the STP that highlights the planning for system testing.
- ref'KNEAD'STS'ExProj, ref'KNEAD'STS'ExProj [ref'KNEAD'STS'ExProj] is the STS, which is sometimes called a test procedure. There could be multiple of these based on the overall project size.
- ref'KNEAD'STR'ExProj, ref'KNEAD'STR'ExProj [ref'KNEAD'STR'ExProj] is an STR that documents the results of a given test. Multiple instances are expected based on the test plan. And, there could be multiple versions of a given test plan to document repeated occurrences of a given test specification/procedure.
- ref'KNEAD'SVD'ExProj, ref'KNEAD'SVD'ExProj [ref'KNEAD'SVD'ExProj] is an SVD that documents a given release of a system. Multiple versions of these "release notes" are expected, with one SVD issued for each system release cycle.

System Development Plan

3.5 Schedule and Resource Constraints

This section is ...TBD....

3.6 Other Constraints

This section is ...TBD....

System Development Plan

CHAPTER 4

System Development Plans

This chapter is ...TBD....

4.1 Hardware Development Plans

The System will not need additional hardware for completion of work. If additional features are needed then this section shall be updated.

4.2 Firmware Development Plans

This System would require new updates to the firmware. Most firmware update is caused because of different packages that would update the middleware on the system. To keep the system up to date. Every release would have a tag to which firmware released.

4.3 Software Development Plans

The design shall be written as a uml format. Then would have a top down design.

4.4 Integration Plans

Currently, the plan is the update to the system through STLink. The STLink should be used to used to flash the system and debug the system.

4.5 Testing Plans

To keep a CICD pipeline structure, there shall be an automated process to build and test my code. As code get developed and processed every merge into a codebase.

4.6 Other Development Activities

This section is ...TBD....

SDP20231224-P1:126

System Development Plan

CHAPTER 5

System Transition Plans

This chapter is ...TBD.... 5.1 Configuration Management Plans This section is ...TBD.... 5.2 Release Plans This section is ...TBD.... 5.3 User Support Plans This section is ...TBD....

5.4 Other Transition Plans

This section is ...TBD....

System Development Plan

CHAPTER 6

Management and Control Activities

The full codebase will be Version Source Controlled (VSC).

6.1 Technical Review Events

The development system does not have technical review events.

6.2 Skills and Resources Needed

Users shall have documentation and demonstrations on how the system would work. This would be displayed on the LCD screen.

6.3 Scheduled Development and Monitoring

This would be maintained by the professor's schedule.

6.4 Other Management and Control Activities

This section is ...TBD....
